METHODOLOGICAL NOTES

- All Spain's international trade data presented in this report are available at the website <u>DataComex</u> of the <u>Secretariat of State for Trade</u> (<u>http://datacomex.comercio.es/</u>), in the section corresponding to Spain. The user can make personalized queries according to different variables such as flow, country, commodity or Spanish region.
- The statistics presented in this report correspond to international trade in goods statistics of declared trade data provided by the Spanish <u>Customs and Excise Department</u> (Tax Agency) and compiled according to the UN Manual of International Merchandise Trade Statistics (IMTS 2010). It does not include Intra-EU estimates for trade below Intrastat exemption threshold.
- Data for the reference year are provisional. Final data are published at the end of the following year. In between, they are not subject to revision. In provisional data, those Intrastat operations being informed after the publication of its corresponding reference month will be assigned to the nearest pending month. Notwithstanding, in the final data all operations will be reassigned to their corresponding reference month. Year-on-year percentage change is always calculated with the same type of data (provisional over provisional basis, even if final data are already available for the previous year).
- Information in real terms is provided by the <u>Ministry of Economic Affairs and Digital Transformation</u> and it is calculated using Unit Value Indices.
- Seasonally adjusted data: the estimation of the model, the decomposition of the series and its seasonal and calendar adjustment have been carried out manually using TRAMO-SEATS program. The calendar regressors have been calculated taking into account INE's "Standard for adjusting seasonal and calendar effects in short-term series" (link). The selected models are ARIMA (0,1,1) x (0,1,1) for exports and ARIMA (0,1,1) x (0,1,1) for imports, with the series in logarithms.
- Sectoral data: the correspondence table between sectors and sub-sectors shown in the report and the 5-digit codes of the Standard International Trade Classification (SITC Rev. 4) is available on:

Notas metodológicas https://comercio.gob.es/ImportacionExportacion/Informes_Estadisticas/Paginas/Informesperiodicos.aspx

- Geographic data: imports are classified according to the country of origin of the merchandise.
- Spain's trade data presented in this report slightly differ from those published by Eurostat due to the application of different methodologies: Spain's Customs (<u>link</u>, in Spanish) and Eurostat (<u>link</u>).
